

**EXCELLENCE HSE  
by LISI**

- **To leave work in good health**
- **To improve our working conditions**
- **To implement eco-friendly processes**
- **To meet all safety and environment requirements**

To achieve the required level of excellence, we have to be exemplary, vigilant and active every day on the ground and in our PSMs.

Our structural LISI E-HSE programme is the motor behind our management system.

It is based on fifteen areas of continuous improvement, including three fundamentals:

- **Assessing and controlling our risks**  
*with LISI RM*
- **Having common HSE rules**  
*with the Golden Rules*
- **Moving towards safer behaviour**  
*with the Safety Culture Program*

Every employee and every partner must be aware that health and safety at work and the environment count among our values and are priorities for us.

We undertake to put in the effort and resources needed to ensure LISI is excellent in this field.
