The trend followed by the sales revenue during the first quarter reflects the organic growth rate that remains high. In terms of published data, the lesser increase reflects the impact of the rise of the euro against the dollar during the period. Sales achieved outside France represent 63% of the consolidated total.

For financial 2007, LISI confirms that the progression of its sales revenue should be in the same order as that displayed at the end of Q3, and that its operating margin should be almost at the level of that of the previous year. These achievements are in line with the strategic plan, which targets one billion euro sales revenue in 2010.

The LISI stock is listed on Eurolist' B compartment and belongs to the CAC MID 100 – Next 150 index under ISIN code: FR 0000050353
